

GAURAV KUMAR

Senior Data Scientist | Product Analytics, Causal Inference & LLM Analytics

India | gauraviitk5@gmail.com | +91-8604931594 | [linkedin.com/in/gauravk26](https://www.linkedin.com/in/gauravk26)

Senior Data Scientist with 8+ years driving \$20M+ in quantified business impact through causal inference, LLM-powered analytics, and product experimentation. Proven track record of reshaping compliance funnels, shipping AI-driven automation, and delivering executive-level insight. Effective across growth, risk, and customer experience, from statistical rigor to business influence.

WORK EXPERIENCE

Coinbase

05/2022 | 05/2026

Data Scientist → Senior Data Scientist (L5) | Remote, India

AI & Support Automation

- Built a two-stage LLM pipeline (summarization, then chain-of-thought classification) processing **100K+ support conversations/month** at 93% validated accuracy, surfacing emerging issues to product teams and delivering **~\$5.2M in annualized savings** via 20% contact-volume reduction and automation gains.
- Built a difference-in-differences causal model quantifying revenue impact of quality support interactions, enabling automation-vs-quality tradeoff optimization, lifting CSAT **5%** and unlocking **~\$720K annually**.
- Designed 3-layer model monitoring (daily LLM-as-judge scoring, weekly embedding clustering of low-confidence outputs, biweekly human audits with **Cohen's Kappa > 0.70**) to catch drift and emerging issue types.

Compliance & Risk Analytics

- Lifted Enhanced Due Diligence (EDD) completion from **15% to 75%** across 4K monthly high-risk users by diagnosing email-based drop-off and recommending in-app flows, unlocking **~\$8.6M in annualized revenue**.
- Analyzed KYC Refresh funnel drop-offs and identified key friction points, lifting completion from **35% to 50%** across 500K monthly users and preventing **~\$375K** in revenue loss from user restriction.

Growth & Product Intelligence

- Identified key drivers of asset-recommendation engagement (price momentum, new-user behavior, long-tail assets) through CTR and segment analysis, delivering **~\$5M in incremental annualized revenue**.
- Built an Experiment Impact Tracker translating all product-team experiment outcomes into north-star metrics, creating executive-level visibility and a company-wide culture of experimentation accountability.
- Built an automated anomaly detection tool monitoring key metrics across all international markets, cutting issue detection time **from weeks to days** and enabling proactive response before escalation.

KPIT Technologies

06/2018 | 05/2022

Data Scientist | India

- Built and deployed an ML pipeline for **real-time remaining-useful-life (RUL) prediction** of spark plugs in production environments.
- Developed fault-detection models for EV power systems, reducing operational downtime through proactive anomaly identification; published at **FISITA World Automotive Congress 2018**.

SKILLS

Languages & Data: Python (NumPy, Pandas, Scikit-Learn, Statsmodels), SQL, PySpark

Machine Learning: Supervised & Unsupervised Learning, XGBoost, Feature Engineering, Model Evaluation & Calibration, Survival Analysis, Anomaly Detection, SHAP

Experimentation & Statistics: A/B Testing, Causal Inference (Difference-in-Differences, Propensity Methods), Hypothesis Testing

Generative AI: Prompt Engineering, RAG (Qdrant, Hugging Face), LLM Evaluation (LLM-as-Judge), Text Classification, Agentic Workflows

Product Analytics: Funnel Analysis, Cohort & Retention Analysis, Conversion Optimization, Drift Monitoring (PSI, KS)

Visualization & BI: Looker, Tableau, Superset, Hex, Streamlit

EDUCATION & RECOGNITION

B.Tech, Materials Science & Engineering | IIT Kanpur

2014 – 2018

Excellence Award, Coinbase (H2 2025): Recognized for exceptional ownership in reshaping high-risk compliance product strategy.

Publication: ML-Based Fault Diagnosis in EV Power Systems, FISITA World Automotive Congress, 2018.
